

Experiment 2.2

Student Name: Harsh kumar

UID: 22BCS14116

Branch: CSE

Section: 640-A

Semester: 6th

DOP:24-02-2025

Subject: PBLJ

Subject Code: 22CSH-359

1. Aim: Develop Java programs using autoboxing, serialization, file handling, and efficient data processing and management.

2. Problem Statements:

- **Easy Level:** Write a Java program to calculate the sum of a list of integers using autoboxing and unboxing. Include methods to parse strings into their respective wrapper classes (e.g., Integer.parseInt()).
- **Medium Level:** Create a Java program to serialize and deserialize a Student object. The program should: Serialize a Student object (containing id, name, and GPA) and save it to a file. Deserialize the object from the file and display the student details.
- **Hard Level:** Create a menu-based Java application with the following options. 1.Add an Employee 2. Display All 3. Exit If option 1 is selected, the application should gather details of the employee like employee name, employee id, designation and salary and store it in a file. If option 2 is selected, the application should display all the employee details. If option 3 is selected the application should exit..

3. Implementation/Code:

Problem: Easy

```
import java.util.ArrayList;
```

```
import java.util.List;
```

```
public class exp5 {
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
public static Integer parseStringToInteger(String str) {  
    return Integer.parseInt(str);  
}
```

```
public static int calculateSum(List<Integer> numbers) {  
    int sum = 0;  
    for (Integer number : numbers) {  
        sum += number;  
    }  
    return sum;  
}
```

```
public static void main(String[] args) {  
    List<String> stringNumbers = new ArrayList<>();  
    stringNumbers.add("10");  
    stringNumbers.add("20");  
    stringNumbers.add("30");  
    stringNumbers.add("40");
```

```
    List<Integer> numbers = new ArrayList<>();  
    for (String str : stringNumbers) {  
        numbers.add(parseStringToInteger(str));  
    }
```

```
    int sum = calculateSum(numbers);
```

```
    System.out.println(" sum= " + sum);
```

```
    }  
}
```

Problem:medium

```
import java.io.*;
class Student implements Serializable {
    private static final long serialVersionUID = 1L;
    private int id;
    private String name;
    private double gpa;
    public Student(int id, String name, double gpa) {
        this.id = id;
        this.name = name;
        this.gpa = gpa;
    }
    @Override
    public String toString() {
        return "Student ID: " + id + ", Name: " + name + ", GPA: " + gpa;
    }
}
public class exp5med {
    public static void serializeStudent(Student student) {
        try (ObjectOutputStream oos = new ObjectOutputStream(new
        FileOutputStream("student.ser"))) {
            oos.writeObject(student);
            System.out.println("Student object has been serialized and saved to
            file.");
        } catch (FileNotFoundException e) {
            System.out.println("Error: File not found.");
        } catch (IOException e) {
            System.out.println("Error:      IOException      occurred      during
            serialization.");
        }
    }
    public static Student deserializeStudent() {
        try (ObjectInputStream ois = new ObjectInputStream(new
        FileInputStream("student.ser"))) {
            Student student = (Student) ois.readObject();
            System.out.println("Student object has been deserialized.");
            return student;
        } catch (FileNotFoundException e) {
            System.out.println("Error: File not found.");
        }
    }
}
```

DEPARTMENT OF COMPUTER SCIENCE & ENGINEERING

Discover. Learn. Empower.

```
        } catch (IOException e) {
            System.out.println("Error: IOException occurred during
deserialization.");
        } catch (ClassNotFoundException e) {
            System.out.println("Error: Class not found.");
        }
        return null;
    }
    public static void main(String[] args) {
        Student student1 = new Student(13251, "Manas", 8.3);
        serializeStudent(student1);
        Student deserializedStudent = deserializeStudent();
        if (deserializedStudent != null) {
            System.out.println("Deserialized Student Details:");
            System.out.println(deserializedStudent);
        }
        System.out.println("\nTest Case 2: Attempting to deserialize from a
non-existent file.");
        new File("student.ser").delete();
        deserializeStudent();
        System.out.println("\nTest Case 3: Simulating
ClassNotFoundException.");
        deserializeStudent();
    }
}
```

Problem:Hard

```
import java.io.*;
import java.util.ArrayList;
import java.util.List;
import java.util.Scanner;
```

```
class Employee implements Serializable {

Student object has been serialized and saved to file.
Student object has been deserialized.
Deserialized Student Details:
Student ID: 13251, Name: Manas, GPA: 8.3

Test Case 2: Attempting to deserialize from a non-existent file.
Error: File not found.

Test Case 3: Simulating ClassNotFoundException.
Error: File not found.
PS C:\Users\aryan\Downloads\nik.java-20250224T163003Z-001>

Menu:
1. Add Employee
2. Display All Employees
3 . Exit
Enter your choice: 2
No employees found.

Menu:
1. Add Employee
2. Display All Employees
3 . Exit
Enter your choice:
```

(Fig. 3)

5. Learning Outcome:

1. Learn to manage collections dynamically using ArrayList and HashMap.
2. Understand thread synchronization and priority handling in Java.
3. Develop real-world applications with efficient data management techniques.
